Re: Pre-Submission (Q-Submission) — Request for Written Feedback and Teleconference Product: ARKA platform — ARKA-CLIN (imaging-appropriateness clinical decision support) and ARKA-INS (administrative coverage functions) **Sponsor:** ARKA Health, Inc. · **Submission type:** Pre-Submission

Dear FDA Review Team,

ARKA Health, Inc. ("ARKA") respectfully submits this Pre-Submission to request the Agency's written feedback, and a teleconference, regarding the regulatory status of two software functions of our platform.

ARKA is an early-stage digital-health company. Our platform integrates into clinician ordering workflows over the HL7 CDS Hooks standard and comprises distinct software functions. **ARKA-CLIN** is a clinician-facing function that presents ranked, evidence-cited imaging-appropriateness options at the point of order entry, using only structured clinical data, with the basis for each option displayed for the clinician's independent review. We have designed ARKA-CLIN to meet the four Non-Device Clinical Decision Support criteria under section 520(o)(1)(E) of the FD&C Act. **ARKA-INS** determines health-benefit eligibility, analyzes historical claims data, and supports prior-authorization documentation and cost transparency; we treat these as administrative-support functions under section 520(o)(1)(A). A reference-image viewer that displays previously acquired studies is a separate function and is not part of the functions under review.

We request the Agency's feedback on four questions, presented in full in the Questions document:

1. Does FDA concur that **ARKA-CLIN**, as described, meets the four Non-Device CDS criteria under §520(o)(1)(E)?
2. Does FDA concur that **ARKA-INS's** benefit-eligibility and claims-based functions are administrative support under §520(o)(1)(A)?
3. What does FDA expect for **change control** over ARKA-CLIN's rule library, feature catalogue, and model weights to maintain Non-Device CDS status?
4. Is our current **synthetic-validation and sandbox evidence** sufficient for the stated intended use, or does FDA expect prospective or retrospective clinical data?

We request **written feedback** followed by a **60-minute teleconference**; preferred dates, a draft agenda, and attendees are provided in the Meeting Request. The package is organized around FDA's multiple-function framework and the Clinical Decision Support Software guidance issued January 6, 2026 (re-issued January 29, 2026).

Thank you for your time and consideration. Please direct any questions to the contact below.

Respectfully submitted,

Arri Kanna Founder, ARKA Health, Inc. arrihantk@gmail.com
